

Endura AZ20 oxygen monitor Combustion gas analysis

Superior technology and
quality from the world leader in
oxygen measurement

Advanced design and precision manufacturing

- robust, long-life probe for process temperatures up to 800 °C (1472 °F)
- proven cell design from over 50 years experience
- fast response to process variations
- stable and accurate oxygen measurement

Unique integrated auto-calibration system

- easy compliance for emission monitoring regulation
- reduced installation costs; eliminates requirement for expensive external calibration panel
- reduced maintenance costs

Probe lengths up to 4.0 m (13.1 ft.) and industry-standard flange configurations

- suitable for a wide range of applications
- extensive installation options

Easy cell release

- fully site-serviceable probe
- easy access to internal components

Advanced transmitters

- easy configuration, monitoring and intuitive HMI
- HART communications
- cell performance logging and diagnostics

Introduction

The Endura AZ20 is the latest in a long line of high-quality, combustion gas analyzers from ABB.

The sensor, based on a zirconium oxide cell, is mounted at the tip of the probe that is inserted in the flue duct. The resulting direct, in situ measurement provides accurate and rapid oxygen reading for combustion control optimization and emissions monitoring.

Probe Lengths up to 4.0 m (13.1 ft.)

A wide range of probe insertion lengths from 0.5 to 4.0 m (1.7 to 13.1 ft.) enable installation to the optimum measuring point for accurate oxygen measurement within the duct; even in the largest flue gas ducts and stacks.

A comprehensive range of mounting flanges provide simple installation when plant-wide standard flanges are required or when replacing existing probes.

The transmitter can be probe- or remote-mounted at distances of up to 100 m (328 ft.), thus providing versatile system options for all applications. The probe-mounted transmitter option provides the lowest cost of installation. However, the remote-mounted transmitter provides flexibility when the operationally ideal probe location does not provide easy access for the user.

Probe and Probe-mounted Transmitter

Advanced Design

Designed and manufactured to exacting standards, the Endura AZ20 ensures long periods of trouble-free operation in even the most arduous of applications.

The operating process temperature of up to 800 °C (1472 °F) extends system suitability into previously impossible applications and enables optimum probe location within the process.

The modular design, with reduced component count, improves the robustness and reliability of the system and simplifies routine maintenance and servicing.

Complete traceability ensures only the highest quality materials are used in the analyzer's construction and rigorous manufacturing, inspection and testing procedures (to international standard ISO 9001) result in a monitor of superior quality with prolonged probe life.

Probe and Remote-mounted Transmitter

Modular Construction

Endura AZ20 oxygen monitor

Combustion gas analysis

Easy Cell Release

The Endura AZ20 probe has retained the easy-access cell arrangement of the previous generation ZFG2 probes. Cell replacement can be performed on-site using basic hand tools; even after long periods of high temperature operation where screw threads have 'seized' and can no longer be released.

Kits containing all the parts needed to complete maintenance are available from ABB to ensure a technician can perform services quickly, efficiently and at minimum cost.

Proven Cell Design

ABB's metallurgically bonded, multi-layer electrode technology increases the cell's resistance to sulphurous and reducing atmospheres and high temperature operation. This extends the life-cycle of the cell in the most arduous applications such as sulphur recovery processes, crematoria and industrial/clinical waste incineration.

Zirconia Cell

Optional Flow Rate Control to the Sensor

The correct flow rate of test gas and reference air is essential to ensure the accurate operation of Zirconia-based AZ20 oxygen analyzers.

This is achieved using one of two options:

- using flow restrictors (no flowmeters required):
 - flow restrictors fitted in the sensor head guarantee the correct flow of test gases and reference air by applying the gases / air to the probe at a fixed pressure of 15 psi (1.0 bar)
- using flowmeters (no restrictors):
 - the Endura AZ20 uses flow meters with flow control valves to regulate the flow of test gases and reference air into the sensor

Unique Integrated Automatic Calibration

The all new Endura AZ20 automatic calibration system eliminates the need for the expensive ancillary equipment required for automatic calibration on traditional flue gas oxygen analyzer systems. ABB's fully integrated, automatic calibration feature controls the test gas sequence and detects test gas availability, eliminating incorrect calibrations due to loss of test gas.

Advanced Automatic Calibration Facility

Integrated automatic calibration secures the oxygen measurement, providing complete confidence in the analyzer's performance.

Long-term operation without technician intervention minimizes operating costs, total cost-of-ownership, optimizes system accuracy and contributes to the CEMS (Continuous Emissions Monitoring Compliance). A significant proportion of service visits to an analyzer result in 'no fault found'. Endura AZ20's high-quality manufacture, advanced diagnostics and fully-integrated, automatic calibration is targeted at reducing this wasted effort and cost.

The AutoCal option can be used with or without the flow restrictors option.

Advanced Transmitter

The Endura AZ20 transmitter incorporates the most up-to-date design and technology available today.

ABB's universal human/machine interface (HMI) with its large, clear, backlit graphical display, 'through-the-glass' control and intuitive menu structure simplifies transmitter configuration and operation.

The user-friendly interface enables fast, easy data entry for all parameters and the 'Easy Setup' menu speeds and simplifies system commissioning.

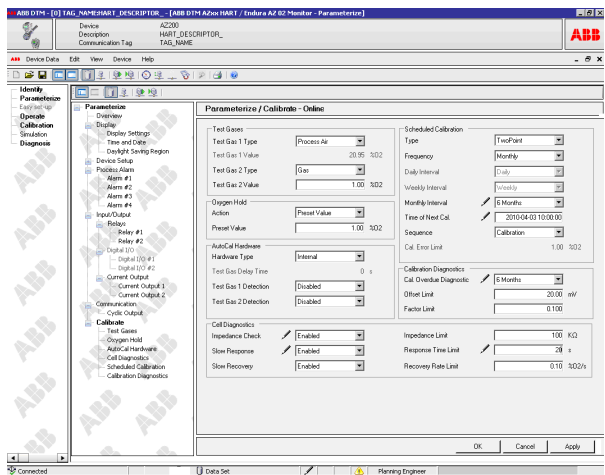

Advanced diagnostics, in accordance with NAMUR NE107, classify alarms and warnings as 'Maintenance Required', 'Check Function', 'Failure' and 'Out-of-Specification'. Cell performance is monitored by the transmitter; indicators such as cell impedance, rate-of-response to test gasses and changes in calibration offset/factor are recorded and analyzed. The current cell 'quality' is displayed by the transmitter as a visual indication of the measurement confidence; providing the operator all the information required to keep the monitor operating at peak performance.

The Performance Log holds up to 100 time-stamped events. When the log is full, the oldest data is overwritten by new entries. The log contains details of measurements and coefficients for all calibrations and accuracy checks.

2 Relay outputs and a traditional analog output are fitted as standard, with the option of adding a second analog output or 2 digital inputs/outputs (I/O).

The Endura AZ20 transmitter is equipped with HART communication as standard, supported by a full Device Type Manager (DTM) to enable remote access to the analyzer through a user-friendly graphical interface. The DTM provides full access to the transmitter setup, logged data and diagnostics information as well as live data.

The IrDA standard infrared communication port can also be used with the DTM to upload and download device configurations. In addition, it enables data logged values and diagnostics to be viewed on a hyperterminal interface or a PC. The device's firmware can also be upgraded using this port.

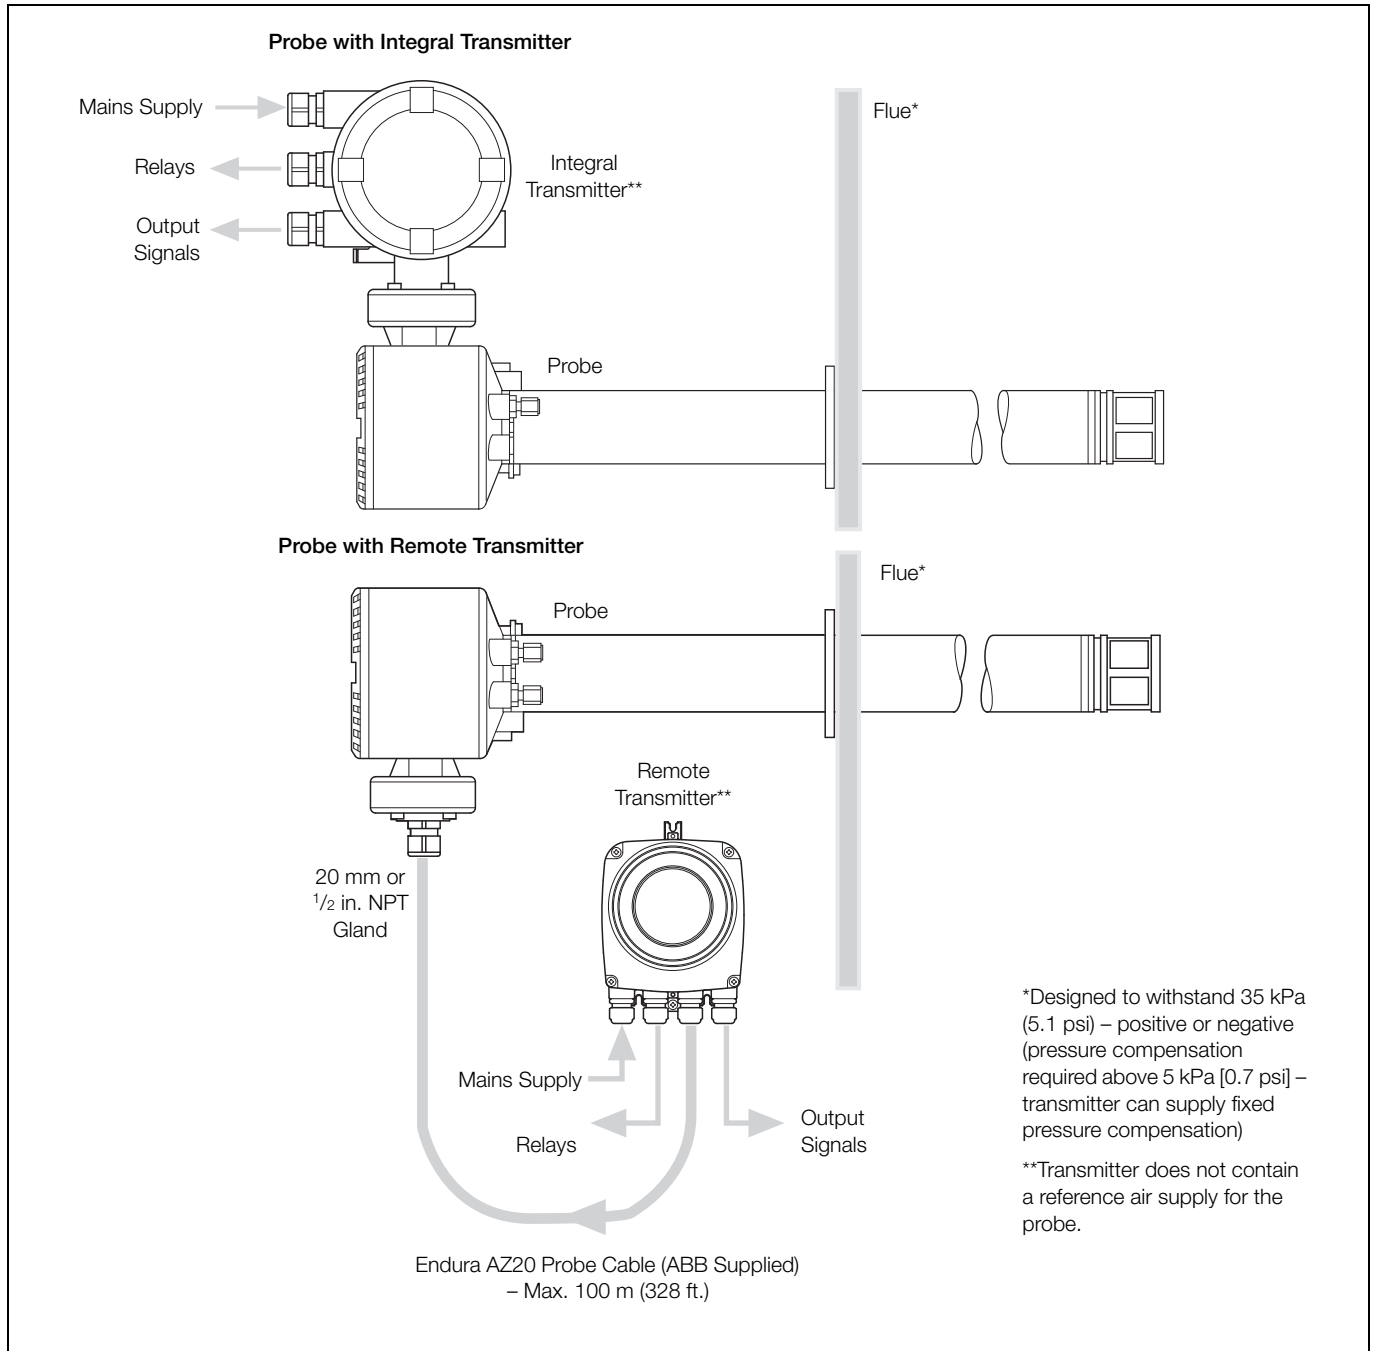

DTM Graphical Interface

Transmitter Options

There are 2 Endura AZ20 transmitter options – probe with integral transmitter and probe with remote transmitter:

Endura AZ20 Transmitter Options

Test Gas and Reference Air Supply Configurations – Automatic Calibration (AutoCal) Systems

AutoCal with Air Supply and Restrictors

AutoCal with Air Supply and no Restrictors

AutoCal with Test Gas(es) and Restrictors

AutoCal with Test Gas(es) and no Restrictors

Test Gas and Reference Air Supply Configurations – Non-automatic Calibration (Non-AutoCal) Systems

Non-AutoCal with Air Supply and Restrictors

Non-AutoCal with Air Supply and no Restrictors

Non-AutoCal with Test Gas(es) and Restrictors

Non-AutoCal with Test Gas(es) and no Restrictors

Overall Dimensions

Probe and Integral Transmitter

Overall Dimensions – Probe and Integral Transmitter

Probe Specification

Physical

Probe insertion lengths

0.5 m (1.7 ft.)	2.5 m (8.2 ft.)
1.0 m (3.3 ft.)	3.0 m (9.9 ft.)
1.5 m (5.0 ft.)	3.5 m (11.5 ft.)
2.0 m (6.6 ft.)	4.0 m (13.1 ft.)

Process connection

All probe lengths:

ANSI B16.5 150 lb

2, 2.5, 3, 4 in

DIN2501 Part 1

65, 80, 100 mm

JIS B2238 5K

NPT

(flange pressure ratings do not apply)

0.5 m (1.7 ft.) probes	ABB 500 mm (19.7 in) standard flange
1.0 m (3.3 ft.) and longer	ABB 1000 mm (39.4 in) standard flange

Probe body material

316L stainless steel

Mounting angle

Horizontal to vertically down

Note. Horizontally-mounted probes greater than 2.0 m (6.6 ft.) in length may need to be supported.

Process Conditions

Standard process temperature

All probe lengths* -20 to 800 °C (-4 to 1472 °F)

Process pressure

Designed to withstand 35 kPa (5.1 psi) – positive or negative
(pressure compensation required above 5 kPa (0.7 psi) – transmitter can apply fixed pressure compensation)

* For > 2 m (6.6 ft.) probes, special conditions may apply

Operating requirements

Reference air

Regulated supply	Probes with restrictors	1 bar (15 psi), flowmeters not required
	Probes without restrictors	1 bar (15 psi) flowmeters required with flow set to 0.3 to 0.5 l/min (0.64 to 1.06 scfh)
Pumped supply	Probes with / without restrictors	Preset flow 0.3 to 0.5 l/min (0.64 to 1.06 scfh)

Test gas

User-selectable, 100 to 0.1 % O₂ balance N₂ and/or air (air is recommended as one of the test gases)

Probes with restrictors	1 bar (15 psi) – flowmeters not required as restrictors preset flow to 2.2 l/min (4.662 scfh)
Probes without restrictors	1 bar (15 psi) flowmeters required, set to 2.2 l/min (4.662 scfh) flow

Calibration

Manual, semi-automatic or automatic (controlled by Endura AZ20 transmitter)

Automatic calibration

AutoCal hardware

Optional built-in solenoid valves for control of test gas flow
Built-in pressure switches to detect presence of test gases

Heater Operational Requirements

AZ20 Probe

Nominally 190 Ω, 70 W at 115 V AC – power is limited to 70 W max. by AZ20 transmitter over an 85 to 265 V AC range

AZ20 / ZFG2 Replacement Probe

Nominally 25 Ω, 120 W at 55 V AC – for use only with a ZDT analyzer or ZMT transmitter

Transmitter Specification

Transmitter enclosures

Remote

- Wall-, pipe- or stand-mounted
- 4 gland entries
- Optional 1/2 in NPT, M20

Integral

- Head-mounted
- 3 gland entries
- Optional 1/2 in NPT, M20

Automatic calibration

AutoCal hardware

- Isolated solenoid valve control as standard, 24 V @ 2 W per valve*
- Dedicated isolated digital inputs to monitor pressure switch contacts as standard – voltage-free, normally closed with gas present

Display and switches

Display type

- Graphical 128 x 64 pixel LCD

Display backlight

- Green LED

Operator switches

- 4 capacitive switches
(operated through the front glass)

Relay outputs

Number

- 2 standard

Type

- Normally closed
- 5 A @ 230 V AC or 30 V DC (non-inductive)

Functions

- User-configurable – can be activated by one or more of the following signals:

- Process alarm 1, 2, 3, 4
- Calibration in progress
- Calibration failed
- Out of test gas 1, 2
- Test gas 1 valve control
- Test gas 2 valve control
- Failure diagnostic
- Out-of-specification diagnostic
- Maintenance required diagnostic
- Function check diagnostic

*For driving internal automatic calibration (AutoCal) probes or can be used to drive external calibration units on remote transmitters only.

Analog outputs

Standard

- 1 isolated current output
- Programmable to retransmit oxygen (linear or logarithmic) or temperature
- Programmable over 4 to 20 mA
- Over-range capability to indicate system failure programmable from 4 to 22 mA

Optional

- 1 isolated current output
- Programmable to retransmit oxygen (linear or logarithmic) or temperature
- Programmable over 0 to 20 mA
- Over-range capability to indicate system failure programmable from 0 to 22 mA

Digital inputs/outputs

Number

- 2 (optional)

Type

- User-configurable as either input or output

Input

- Volt-free contact

Output

- Transistor switch capable of sinking 220 mA
- Low output, < 2 V DC
- Switch voltage 30 V DC maximum

Isolation

- Not isolated from each other or from other circuitry

Input functions

- User-configurable for:
 - Automatic calibration start
 - Automatic calibration stop
 - Automatic calibration start/stop

Functions

- User-configurable – can be activated by one or more of the following signals:
 - Process alarm 1, 2, 3, 4
 - Calibration in progress
 - Calibration failed
 - Out of test gas 1
 - Out of test gas 2
 - Test gas 1 valve control
 - Test gas 2 valve control
 - Failure diagnostic
 - Out-of-specification diagnostic
 - Maintenance required diagnostic
 - Function check diagnostic

...Transmitter Specification

Hart communications

Version

5.7 as standard

Integration

Device Type Manager (DTM) and Electronic Device Description (EDD)
Provide online/offline device configuration, online monitoring of measurement values and diagnostic states

DTM

FDT v1.2.1 compliant
Works with FDT framework packages
(for example, ABB Asset Vision Basic)

EDD

Compliant with suitable framework tools
(for example, SDC 625 and Simatic PDM tools)

Infrared service port

Accessibility

Through front face

Type

IrDA standard

Baud rate

Up to 115K baud

Functions

Firmware update
Remote HMI
Diagnostic log download
Datalog output
HART via IrDA

Languages

English

Calibration

Manual calibration

1 point (offset)
1 point (factor)
2 point (offset + factor)

Automatic calibration

1 point (offset)
2 point (offset + factor)

Calibration control

Front panel controls
Digital inputs
HART commands
User-defined schedule

Calibration scheduler

User-defined schedule enables automatic calibration frequency to be set from 1 day to 12 months

Ordering information – ZFG2 Replacement Probe

AZ20/	0	0	0	2	X	2	2	X	X	1	1	X	X	X	X	/STD
Transmitter Options																
None (no transmitter required)	0															
Transmitter Entry Type																
None (no transmitter required)		0														
Transmitter System Type																
None (no transmitter required)			0													
Probe Type																
ZFG2 replacement				2												
Probe Entry Type																
Metric (M20)																1
Imperial (NPT)																2
Probe System Type																
Remote																2
Automatic Calibration																
No automatic calibration (without flow restrictors)																2
Insertion Length																
0.5 m (1.7 ft.)																1
1.0 m (3.3 ft.)																2
1.5 m (5.0 ft.)																3
2.0 m (6.6 ft.)																4
Flange Type																
None (no probe required)	0															6
ABB standard flange	1															7
DIN 65 mm flange	2															8
DIN 80 mm flange	3															9
DIN 100 mm flange	4															A
ANSI 2 in flange	5															B
Thermocouple Type																
Type K																1
Cell Options																
Standard cell																1
Conduit																
None																7
6 metres (20 ft) conduit for ZFG2 replacement probe																8
10 metres (33 ft) conduit for ZFG2 replacement probe
